Sustainable deliveries – Freight analysis and development of a c/o address solution

BuyZET Conference – 2019-05-14
Background - Novelog – quick facts

• EU-financed project in the field of sustainable city logistic solutions within the Horizon2020 program

• 28 Partners, of which 12 cities/city areas and 8 universities

• 6 Pilot projects and 6 case studies

• The main activity for the city of Gothenburg was to perform a case study regarding a c/o address for the Nordstan shopping mall. Important elements were gathering of information and analysis of goods flows
Nordstan – key facts

➢ Second biggest shopping mall in Sweden
➢ Located in the city centre
➢ 200 shops and restaurants sharing 70000 square metres of floor space
➢ Turnover of about 450 MEUR
➢ Allmost all deliveries via an underground loading street
➢ Over 500 trucks delivering daily (during peak times)
➢ Owned by five real estate owners
➢ Close cooperation with the municipality since over 10 years regarding traffic and logistics
Goals

• Create a well functioning ”ready to run” concept for consolidation by a c/o address outside the city core, to enable more efficient and sustainable solutions to businesses in the central parts of Gothenburg
• Development of a commercially sustainable solution
• Increase the knowledge of goods flows in central Gothenburg
• Strengthen the work within the city to encourage future sustainable and efficient solutions for city logistics

• Less heavy transports in the city centre*
• Decrease congestion, emissions and noise
• A more pleasant and attractive city environment

* Overall estimated potential to reduce the number of trucks by 50% = 150-200 tons of CO2 annually
Timeline

2015-2016: Pre study, data collection

2017: Analysis, concept development

2018: Procurement of service

2019: Pilot phase – consolidation service
Activities - Nordstan

- Information to all companies (approximately 200 tenants)
- Mapping of goods flows
- Measurement of traffic volumes to the underground loading street
- Measurement of traffic volumes – surrounding streets
- Compilation of results and analysis
- Development of solution proposals
- Simulation and improvement of solutions
- Pilot-test
**Basics – data collection**

Measurement of incoming and outgoing freight traffic to Nordstan
Survey and interviews for the transport companies
Registration of all handled deliveries and shipments for businesses (2 weeks)

**Data for analysis**
- Shipment volumes (number)
- Shipment size (volume)
- Types of goods
- Carriers and packaging
- Demands and requests on freight services
- Handling time for goods
- Types of businesses (size, branch etc.)
- Vehicles used
- Transport companies
- Time and date of deliveries

**Data elaboration**
- Average size of shipment volumes related to business types, sizes etc.
- Share of shipment sizes in different size/number ranges (also related to goods types, type of business etc.)
- Goods volumes in relation to number of vehicles
- Common requests and demands on freight services (in relation to goods types and type of business)
- Goods volumes share per transport company
- The distribution pattern connected to specific hours

Prerequisites regarding delivery time for different flows and goods
Timeline

2017: Analysis, concept development

2018: Procurement of service

2019: Pilot phase – consolidation service
### Final results – overall statistics

- **Others**: 5,7 / 0,6
Distribution patterns of deliveries over time (average day)
Timeline

2018: Procurement of service

2019: Pilot phase – consolidation service
Preferred solution & potential

- C/o-address for consolidation
- Centrally financed by the five real estate owners
- Procurement during the autumn 2018
- Pilot phase during 2019

The pilot concept will address about one third of the businesses in Nordstan (70 companies) with the best prerequisites for consolidation. When fully implemented, the concept is expected to reduce the number of trucks with 25-35% (corresponding to 75-140 tons of CO2 annually).
Important parts of the service

- Customer service and opening hours
- Drop off and pick up routines (internal logistics)
- Documentation and notifications
- Reporting, evaluation, follow up
- Return of goods
- Express deliveries
- Packaging
- Perishable goods (future service)
Selection criteria – pilot phase

- No perishables, tempered goods, or very high value goods
- No narrow time windows or other restrictions
- Several involved transport operators

<table>

Lessons learnt

➢ A good cooperation and a continuing dialogue between the city, the property owners (Nordstan), the businesses, the freight companies and all other stakeholders is imperative to success.

➢ It takes time and resources to undertake this kind of data collection and analysis as well as to set up the boundaries of the case.

➢ A common goal (even if differing motivators) – in this case for example, less congestion, noise, emissions and a more attractive and liveable city centre - is also essential to success. All the stakeholders must see the benefit.

➢ A good business model to ensure the success of implementing the pilot is important.

➢ Creating a c/o address will certainly reduce the number of deliveries to the shopping mall, thus reducing the number of trucks in the city centre.
Thank you for your attention!
