CoCities

Experts Round Table Invitation
Intertraffic Amsterdam RAI
Room G103
26.03.2014, 12:30 - 16:30

The Round Table of Experts will discuss how to implement integrated multimodal information under different ancillary conditions in Europe - from organisational and technical perspective.
Co-Cities partners will share the experiences made in setting up multi-modal services and in implementing direct traveller feedback into the information service, taking a step towards collaborative mobility.

Stakeholders are invited to exchange experiences and contribute to a discussion on a common roadmap for high-quality multimodal and collaborative services in Europe.

Snacks & drinks included, participation is free.

Co-Cities implements multimodal interfaces in a city or region utilising the Co-Cities Commonly Agreed Interface – the CAI – which provides available data and information in standardised formats (e.g. DATEX II) utilising state of the art common web technologies for access. The CAI not only enables a city to publish its data in an easy and cost efficient way, it also provides means to receive user feedback which enables countless possibilities, from reporting broken street lights to commenting on a specific information service, if used carefully.

Cities like Bilbao, Florence (including the whole region), Treviso and Reading have already joined the Co-Cities Forum, the platform for all Co-Cities users. Madrid will join the Forum live during the workshop.

Take the chance to understand the reasons, have a look at the technology and how the services were organised in complex bureaucratic environments.

Discuss the best procedure to publish your data in an easy, cost effective and standardised way, not only but also complying with the open data act of the European Commission.

Central and core goal of the workshop is to discuss a pragmatic approach how to – organisationally and technically (with the latter mostly being the minor issue of the two) – implement multimodal information services under the different ancillary conditions in Europe. Also discussed will be the targeted utilisation of user feedback and how to motivate users to participate, how to integrate cooperative systems.

Please inform us about your participation via lena.reiser@austriatech.at
