

The ENDURANCE national city networks of SUMP – in 25 European Countries!

Since 2013 more than 75 national networking meetings within the ENDURANCE project have taken place in EU countries and Norway to create national SUMP networks.

Inventories of already existing network structures as well as of relevant stakeholders in all partners countries led to the development of roadmaps for the network formation, which served as a basis to built up the national SUMP network in each partners country. In regular talks and close contact with key stakeholders in ministries, city networks, national transport associations etc. the 25 networks were set up and are now ready to actively support its members in preparing and implementing Sustainable Urban Mobility Plans all over Europe.
