

How can a last mile, on demand solution, (vehicle with driver, bikes, shared cars) provide links to and from locations such as railway stations, hospitals and bus/tram stops?

We are aiming at finding funding to support the operation of our pilots, sharing best practice and creating resilient case studies.

Our work group members believe that we are running a project that can support Europe's cities:

- Socially,
- Economically,
- Environmentally.

We will deliver 5 pilot projects to test:

- Practicalities,
- Geofencing,
- Commercial risk and revenue points,
- Software,
- The benefits and user acceptance.
