

Flexible and sustainable mobility for urban areas.

2017 ANNUAL POLIS CONFERENCE
6-7 December 2017, Brussels
Innovation in Transport for Sustainable Cities and Regions

Situation Today: A city built around cars.

Global Megatrends reshape the World.

Urban mobility is changing.

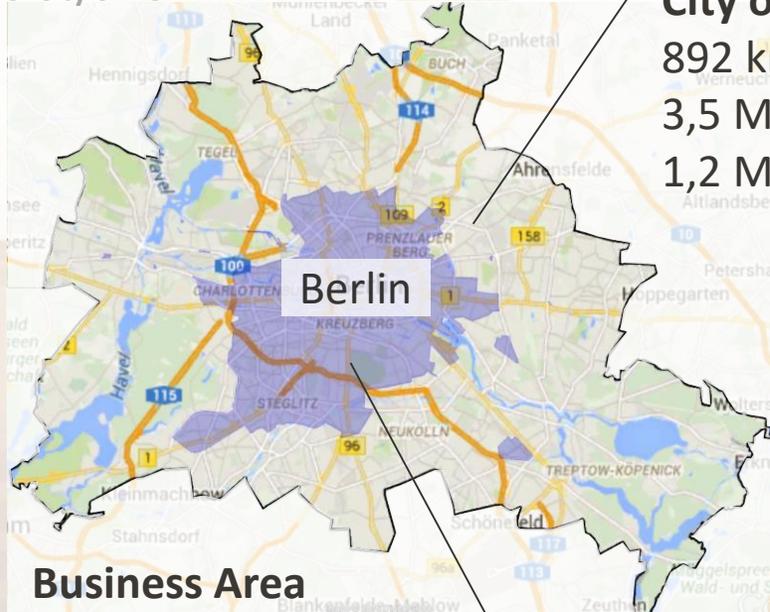

Source: World Cities Report 2016; Global Digital Report 2017

New mobility solutions are required.

DriveNow Business Model: **Easy and intuitive.**

Example: City of Berlin

City of Berlin
892 km² size
3,5 Mio. inhabitants
1,2 Mio. vehicles

Business Area
155 km² size
1,7 Mio. inhabitants
1.300 DriveNow vehicles

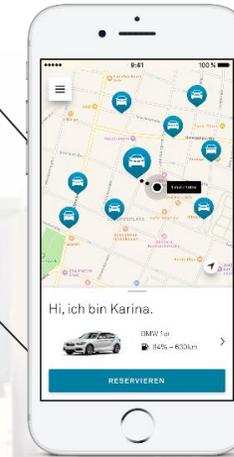

Cars are distributed all over the business area without fixed rental stations

Find a car

Close

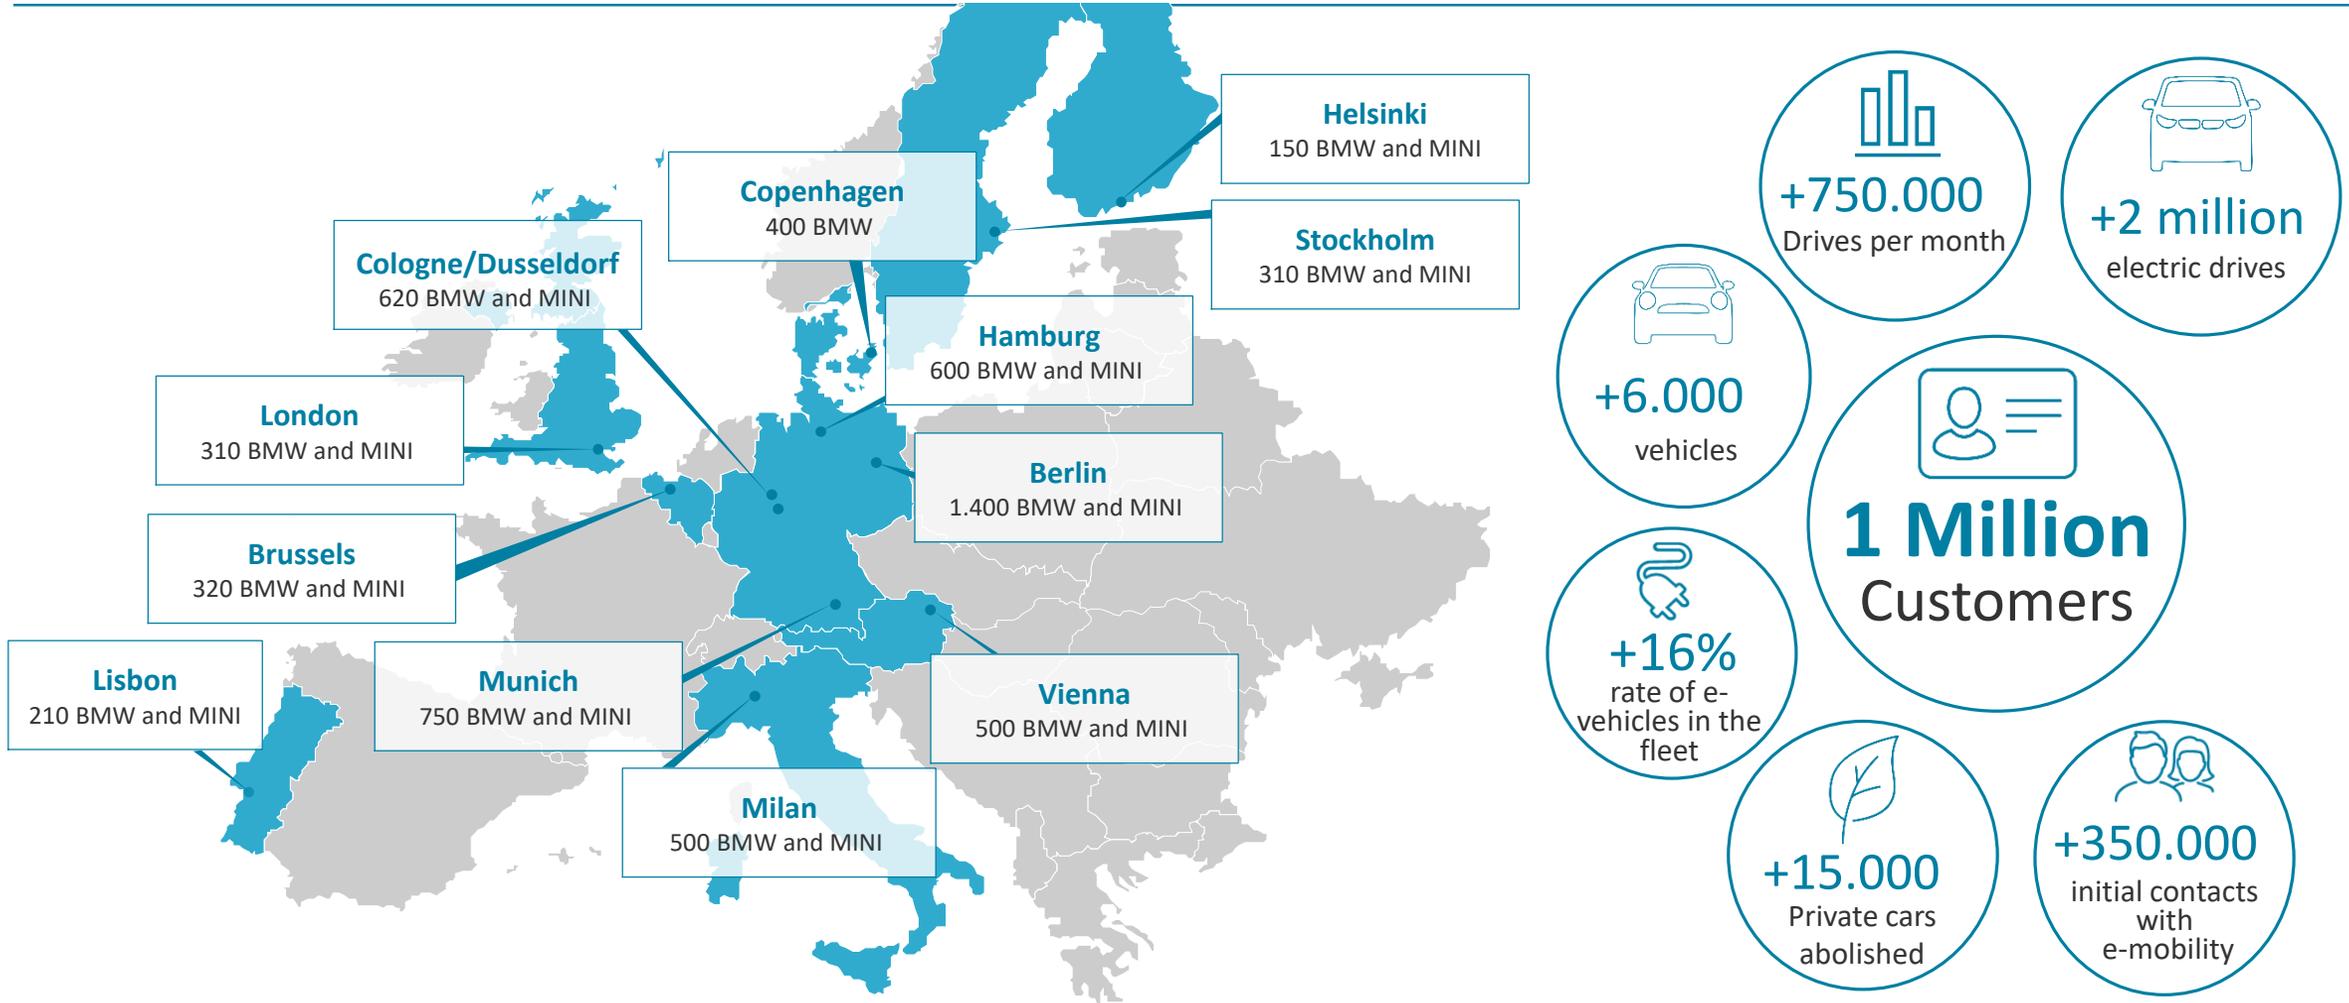

Rental process via app

- On-off registration fee
- Payment by the minute or by the hour
- No monthly or yearly fixed costs

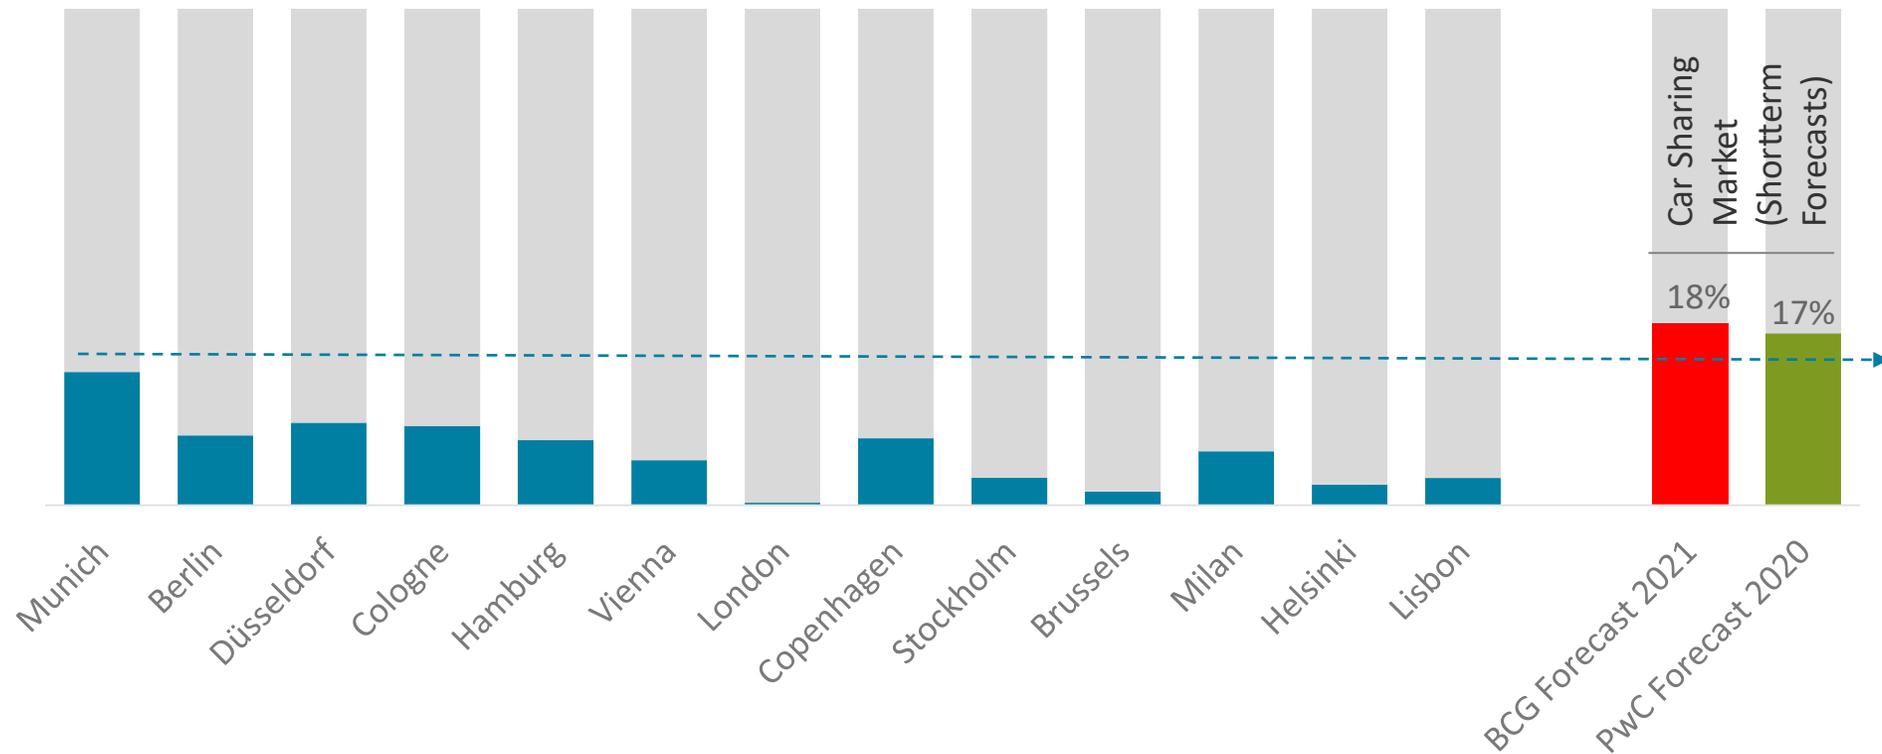

Pay-per-Use price model

Since the start in June 2011 DriveNow has become available in 13 cities across nine European countries.

DriveNow has already reached significant market penetration and is continuously converting new market potential.

DriveNow Customers [in % of city' inhabitants]

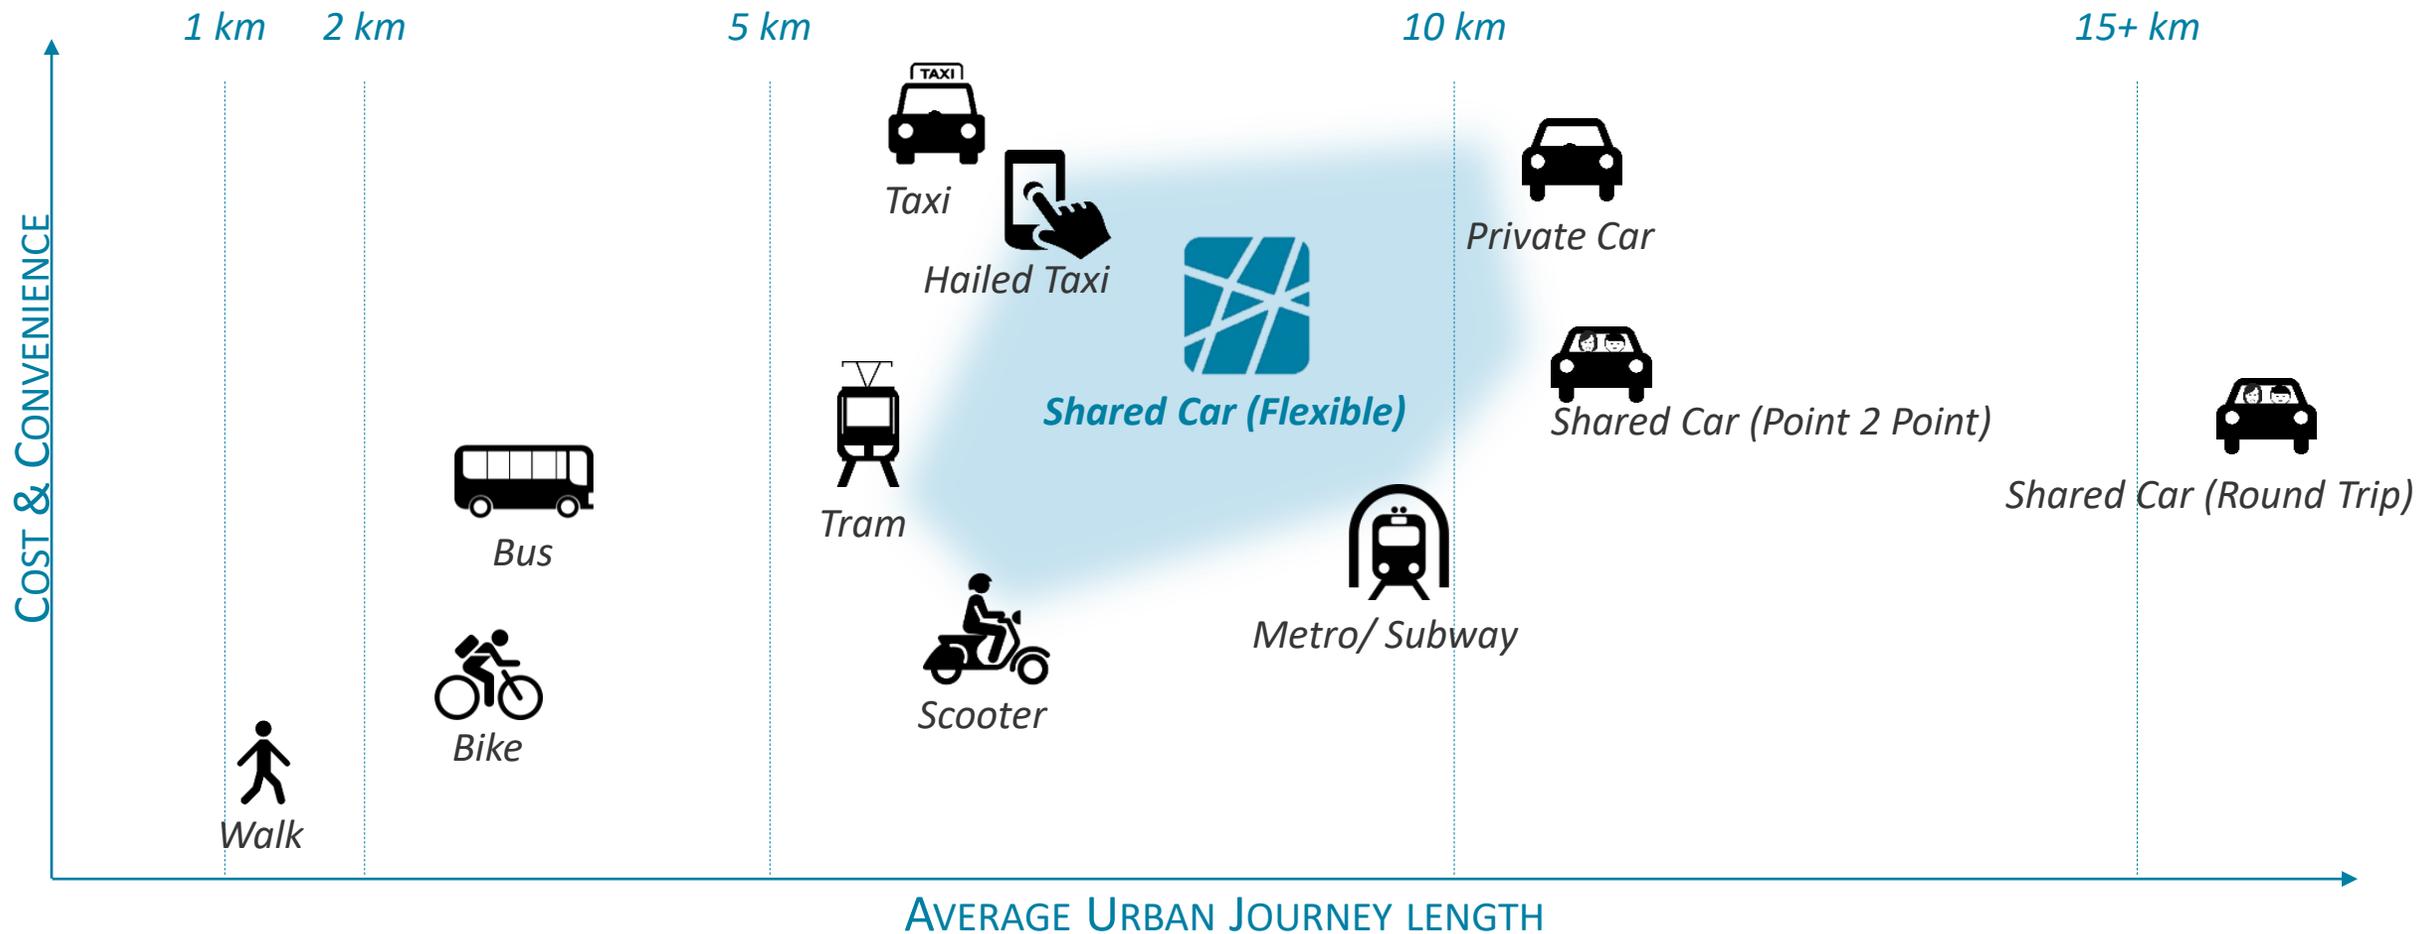

+2,1 Mio. Customers

Shortterm target is to bring all cities to Munich's market penetration

DriveNow is the perfect complement to existing mobility offers...

...and delivers **solutions** for various inner-city problems.

1.

Reduction of inner-city traffic.

2.

Reduction of parking pressure.

3.

Reduction of emissions.

DriveNow is complementing the mobility mix in cities boosting intermodal mobility.

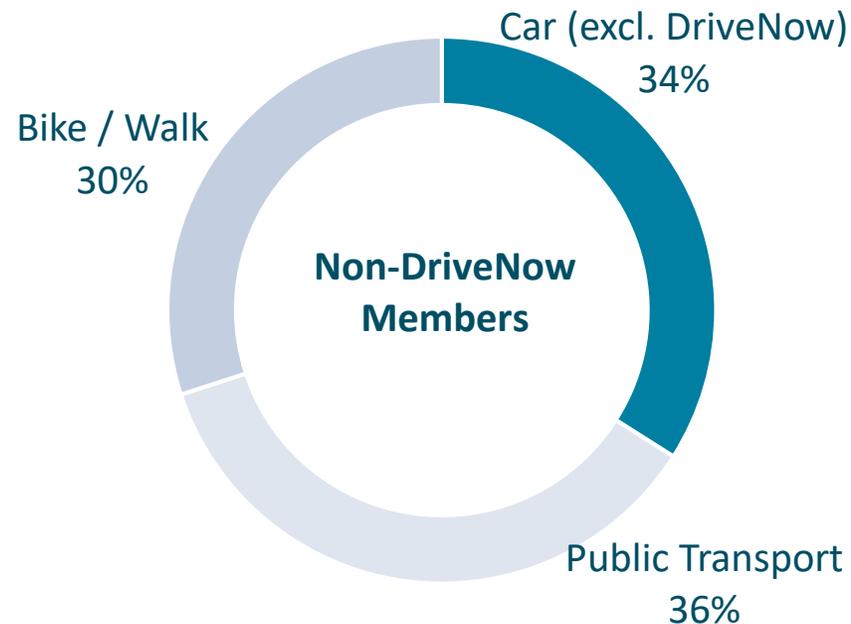

Inner-city Traffic

Parking pressure

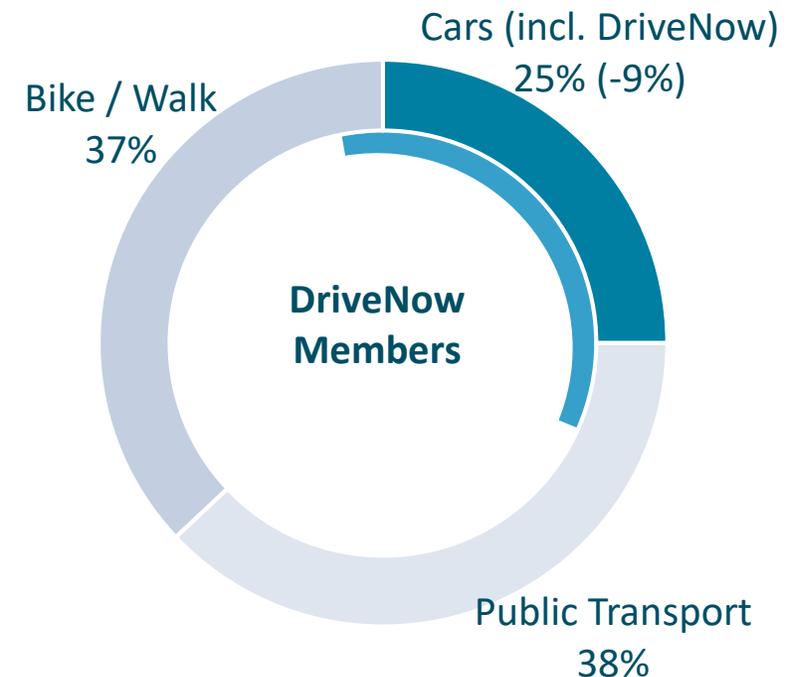

Emissions

AVERAGE VEHICLE USAGE RATES ACROSS EUROPEAN CITIES

n = 10,802 (survey across 13 European cities)

n = 6,940 (survey across 5 European DriveNow markets)

“The overall amount of **vehicle km traveled in the City of Munich has been reduced by ca. 41.000.000 km per year** due to the existence of car sharing”

Source: EVA-CS: Evaluation CarSharing Study by the city of Munich

Through several technological innovations, DriveNow diminishes park-search traffic.

DRIVENOW IS OFFERING CARS AT THEIR DESTINATION BEFORE ARRIVAL.

DRIVENOW IS DETECTING VEHICLES IN PARK-SEARCH-TRAFFIC...

...rerouting to parking infrastructure nearby

Mobility Station

Charging Station

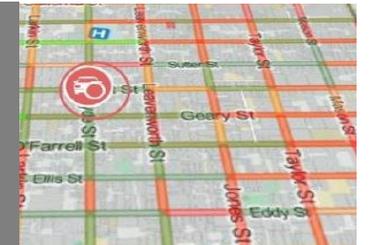

Car Park

...utilizing probabilities and real-time information

Parknav

Siemens Pilot Project

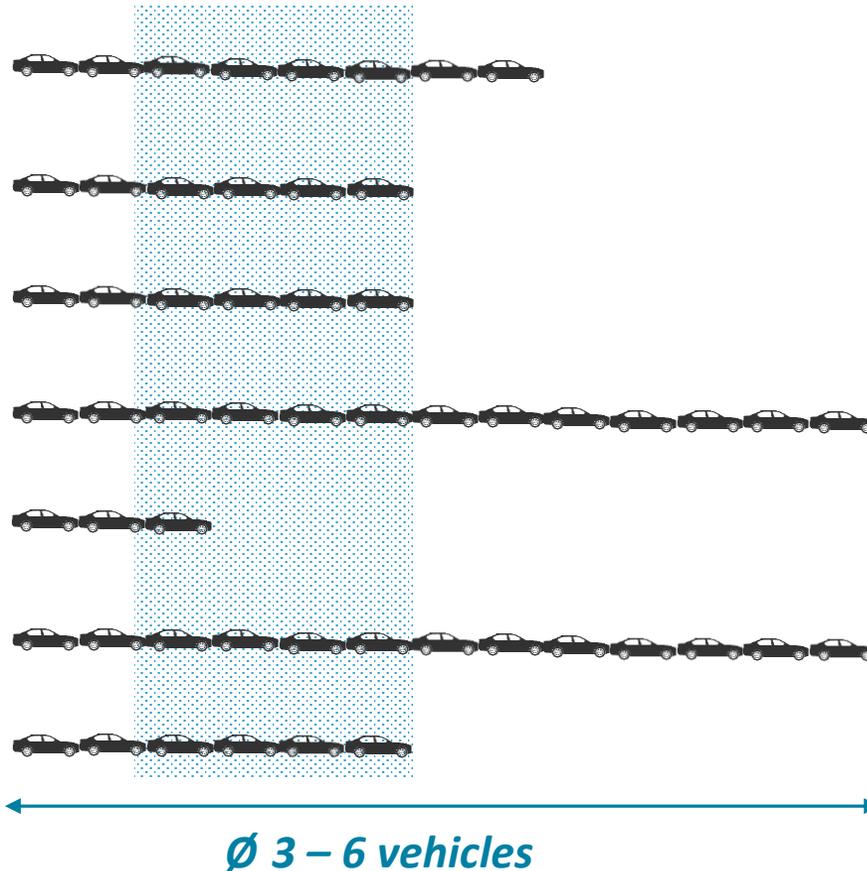

One DriveNow vehicle already replaces up to six private cars – and is significantly higher utilized.

Inner-city traffic

Parking pressure

Emissions

STUDY

Privately owned cars
Ø 23 h parked

DriveNow cars
Ø 3-5h driving

DriveNow vehicles occupy **less parking space** than privately owned cars due **to their higher utilization.**

Source: EVA-CS: Evaluation CarSharing Study by the city of Munich

DriveNow vehicles produce both **less noise and air pollution** than most privately owned vehicles.

Inner-city Traffic

Parking pressure

Emissions

From...

...to

- ▶ Average vehicle age: **9-11 years**
- ▶ Average CO₂ emission: **189 g/km**
- ▶ Average noise level: **About 70 decibel**

- ▶ Average vehicle age: **5-6 months**
- ▶ Average CO₂ emission: **99 g/km / all vehicles EU6-norm**
- ▶ Average noise level: **About 56 decibel**

The average CO₂ emission of a DriveNow vehicle is **48% lower as compared** to privately owned vehicles

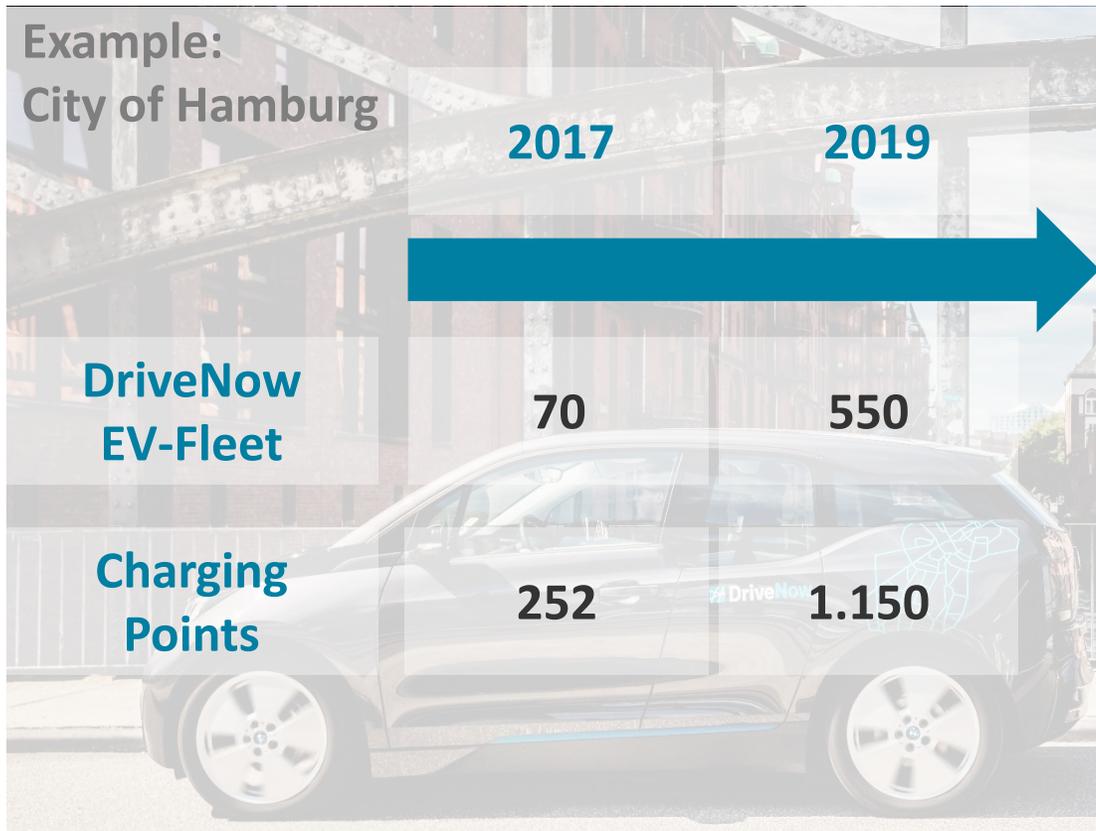

To intensify the sustainable effects, DriveNow offers electric vehicles in all of its cities.
