

# THE TRIPS PROJECT

*TRansport Innovation for vulnerable-to-exclusion People needs Satisfaction*

By Laura Alčiauskaitė

# Background

- There are 42 million people who are considered having a disability in the world, which is more than 10% of population.
- Disability is the result of the **interaction** between a person's impairment and barriers in society, which hinder full and equal participation in all areas of person's life.
- Inaccessible transport **limits the equal access** to important services, job opportunities, education, overall lifestyle choices and capacity for independent living.

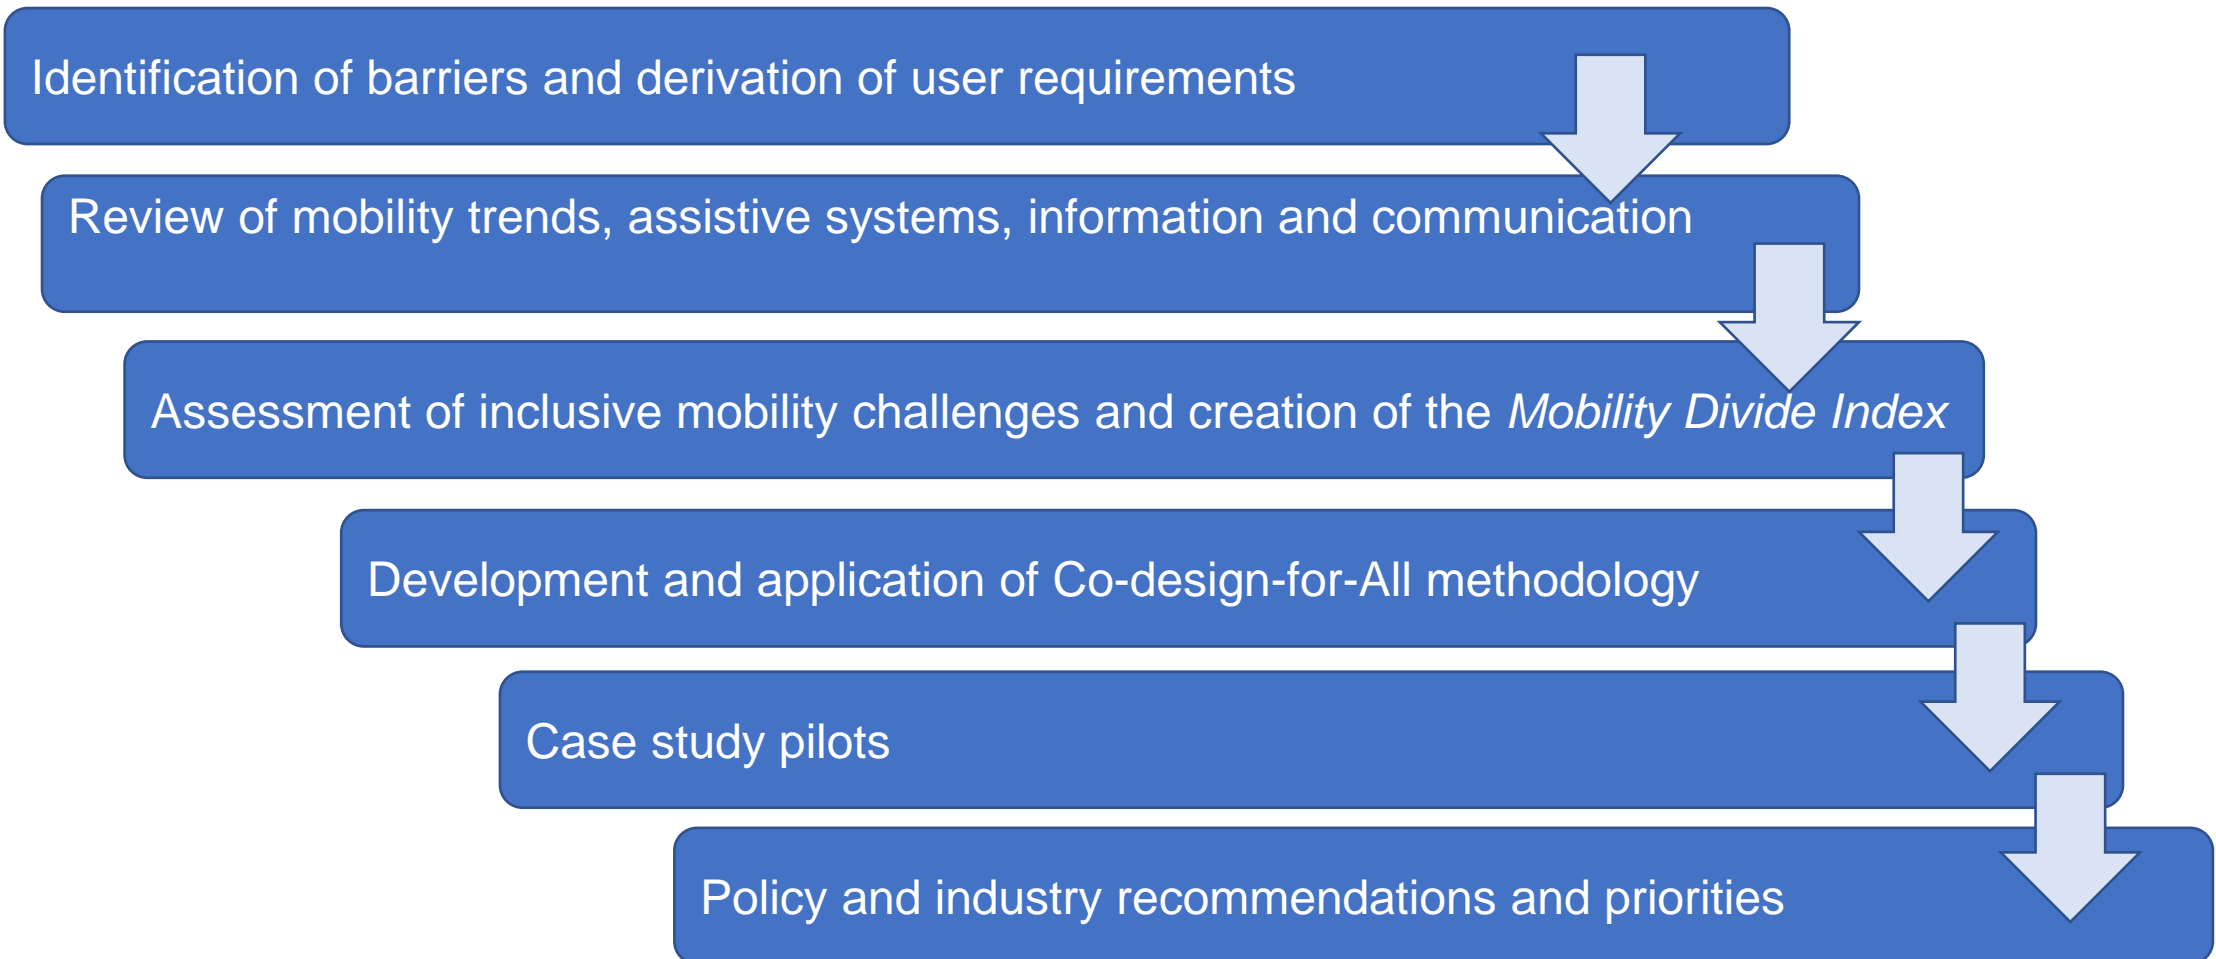

# A New Approach to Designing Transport Systems Free of Mobility Barriers

- The aim is to make the transportation **more accessible** by using a **co-design approach** and empowering the users with disabilities to play a central role in the innovation of transport solutions.
- In the end the urban **inclusive digital mobility solutions** will be designed by disabled users with the support of methodology experts, assistive technology suppliers, transport operators and municipalities.

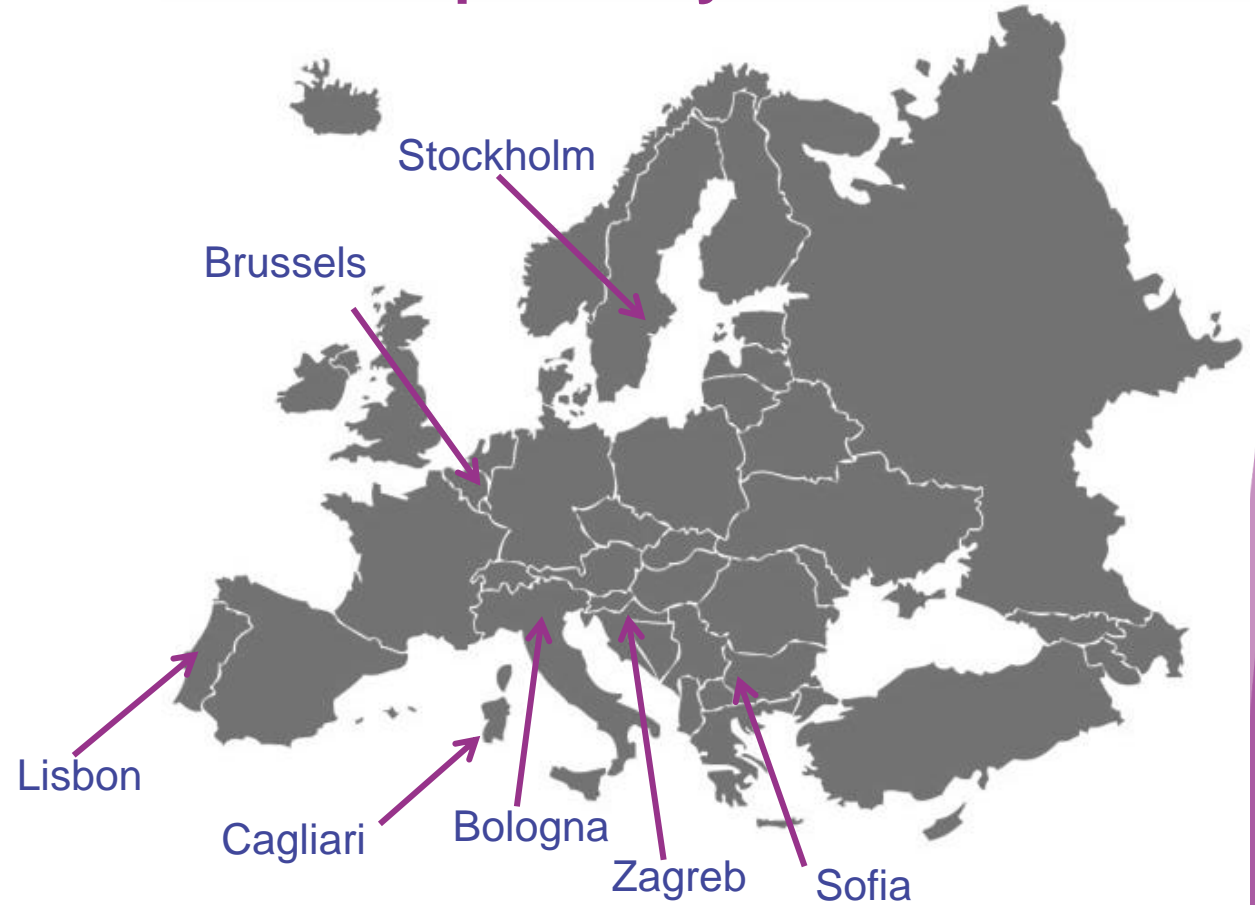

# Methodology

# Who we are and where we work

11 partners

7 European city demonstrators

# How can you get involved?

- Join our pan-european multistakeholder workshops to **brainstorm mobility concepts** and **set innovation priorities** for EU.
- If you are in one of our 7 demonstrator cities, join our working group and **take part in developing prototypes**.
- Join our advisory board and **act as our ambassador**
- Join our contact list to be consulted for the development of a **MoU for future accessible mobility** between cities, disabled organisations and transport providers

# Thank you for your attention!
