

# The road to a BRT investment decision

**Lovisa Blomér and Per Elvingson, Municipality of Örebro**

*Polis Annual Conference 2 December 2020, Session 6A. Managing Urban Infrastructures*

# Örebro

**155 000 inhabitants**

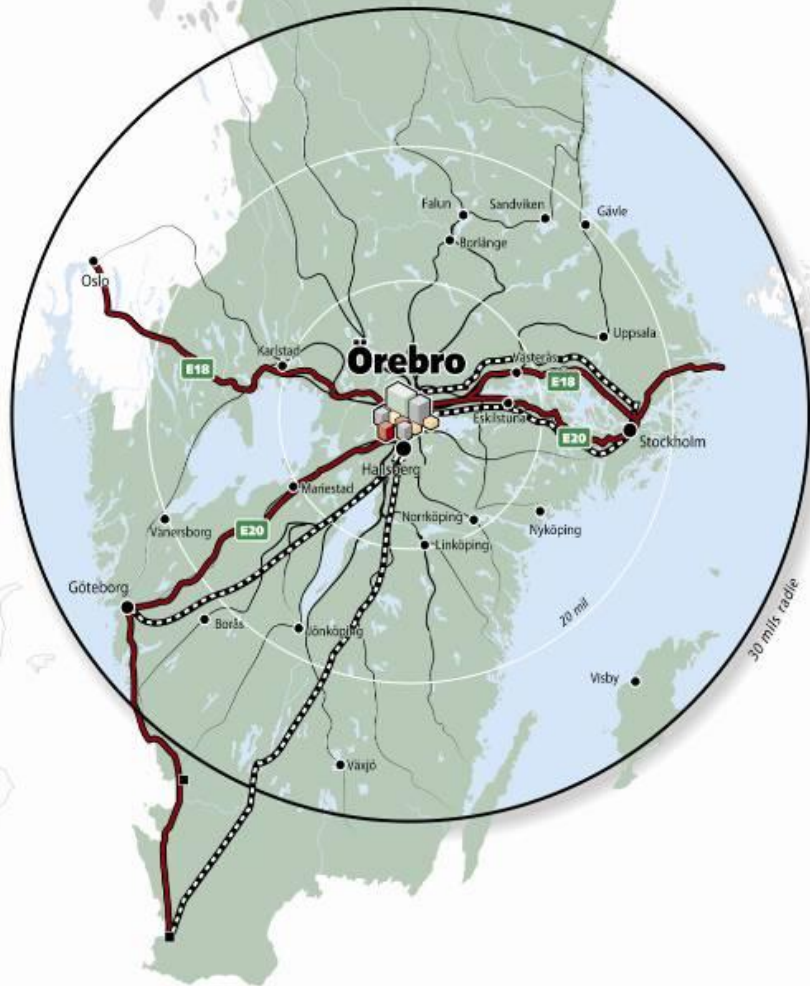

+2000/yr, No. 6 in Sweden

Regional centre, 200 km west of Stockholm.

University with about 15 000 students.

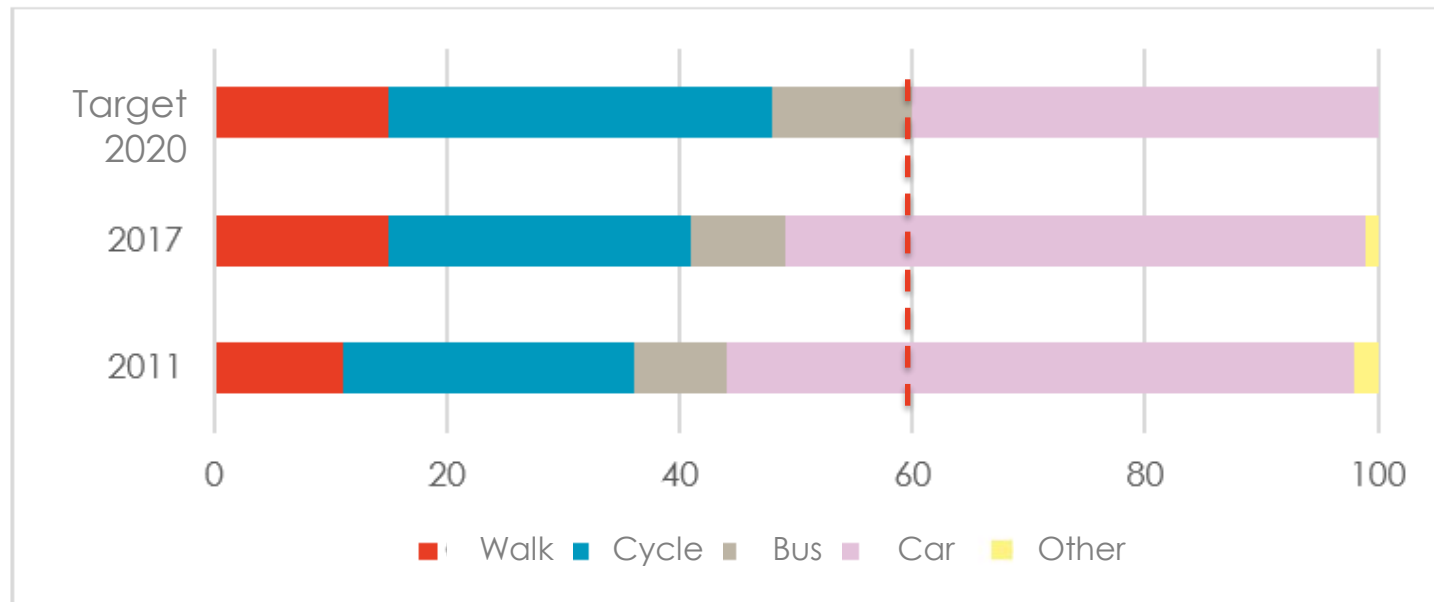

A few large industries, many employees in trade and service sectors.

Logistical centre, both road and rail.

GRAFIK: SVENSKA GRAFISK  
ÅNDRAD: MODIFIERAD: FRE

# Modal split: We are a cycling city!

Modal split (percent) in Örebro municipality according to the travel surveys in 2011 and 2017, and the municipality's modal split target for 2020

# Population: We are a growing city!

## Prognosis:

Increase by 50 000 up to year 2040.

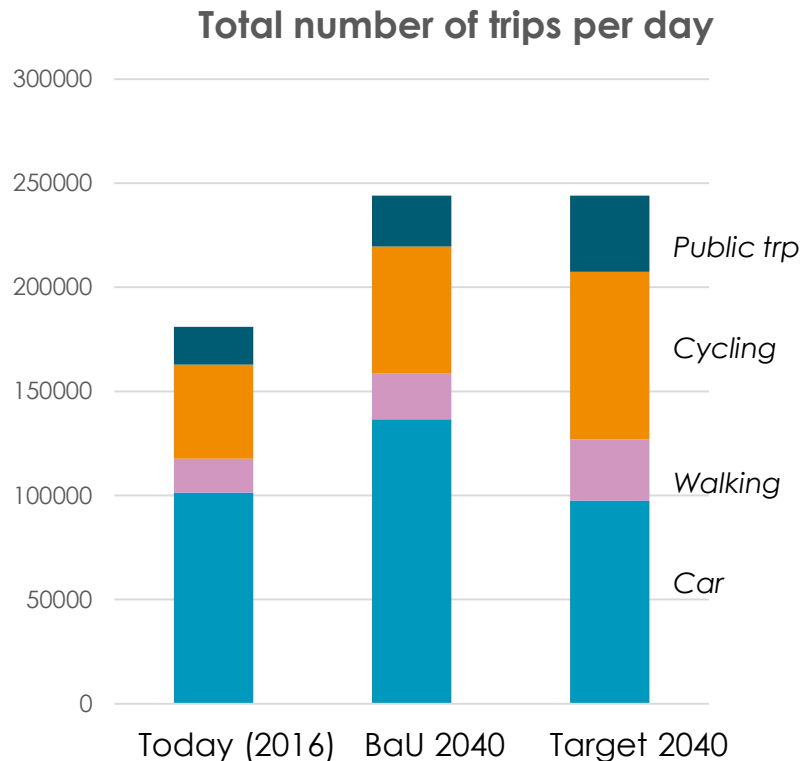

## Business as Usual:

Same travel habits as today means plus 35% for all transport modes.

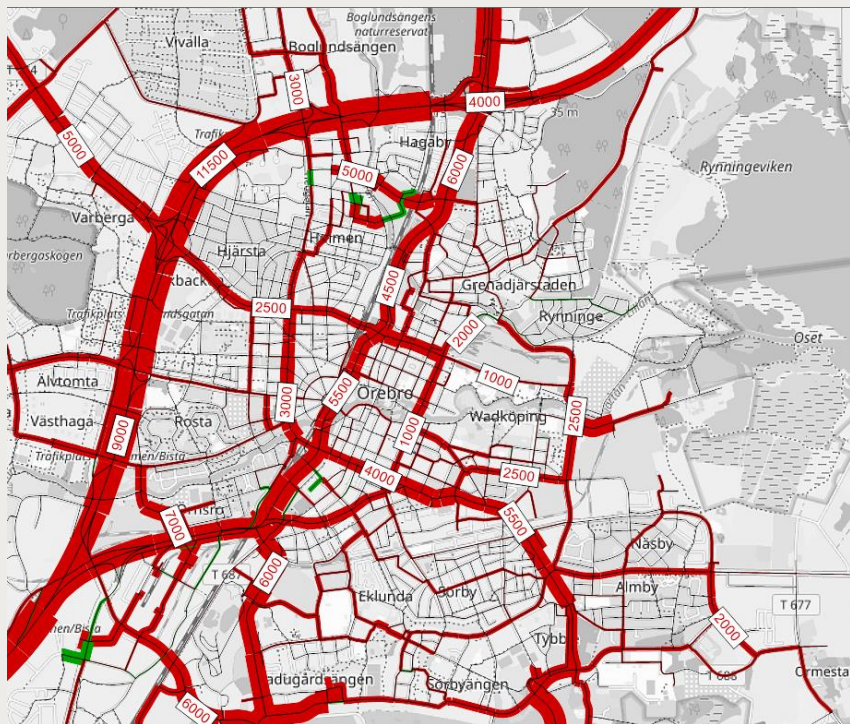

## If we reach our target for 2040:

- Trips with public transport, bike and walking will double but...
- the number of car trips will be the same as today!

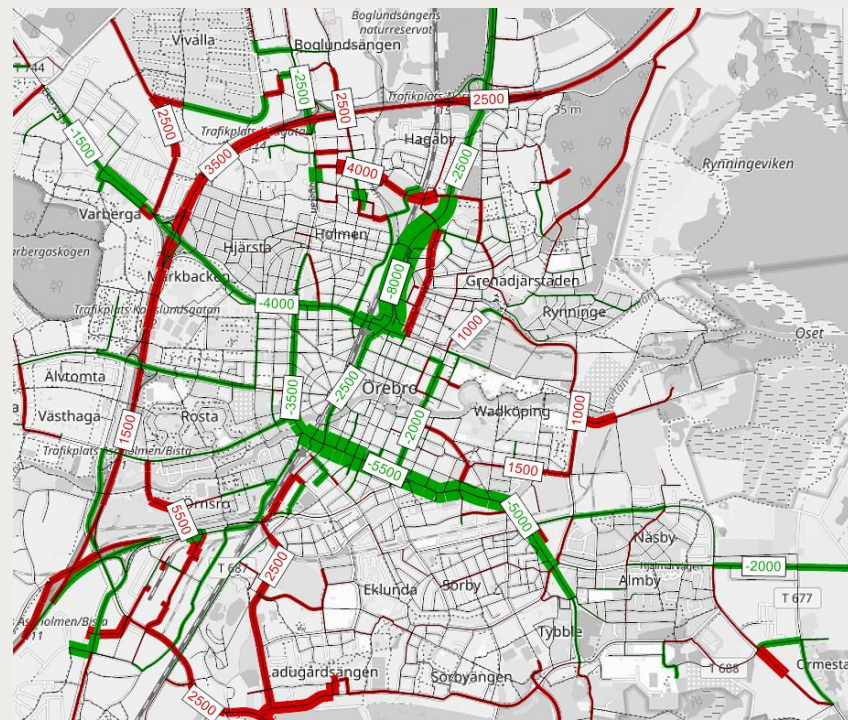

*To remain an accessible and attractive city we need to prioritize space-efficient and sustainable transport modes.*

# Modelling of car traffic in the city year 2040 (VISUM)

No change in modal split.  
**Red** = increase compared to 2016.

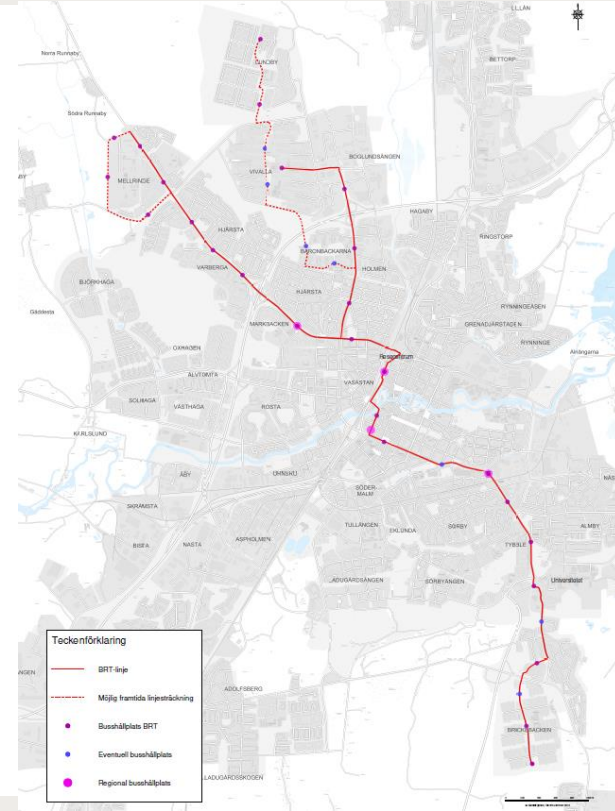

Modal split target achieved.  
**Green** = decrease compared to 2016.

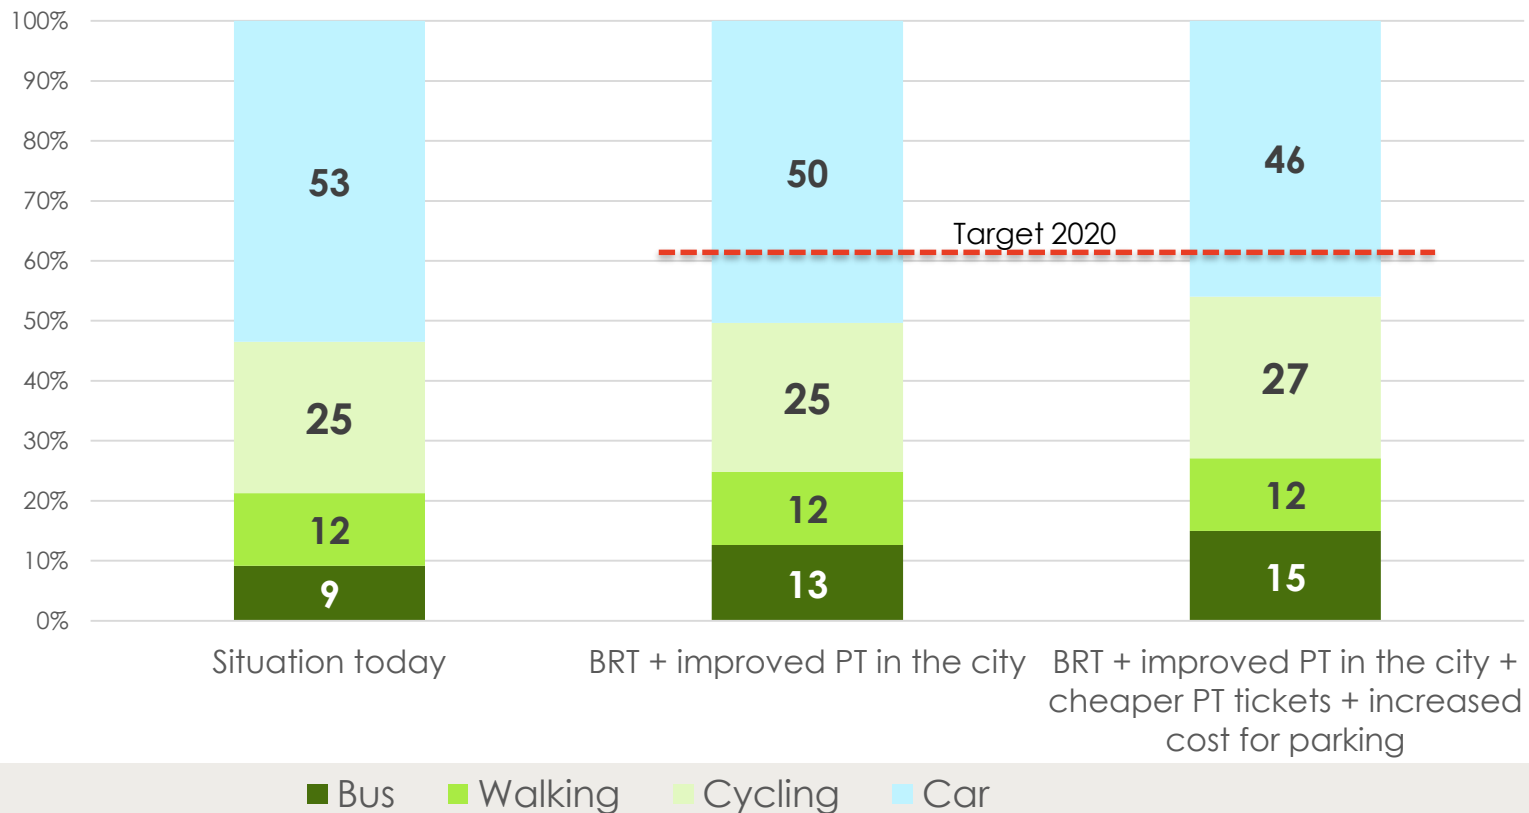

# The BRT project very briefly

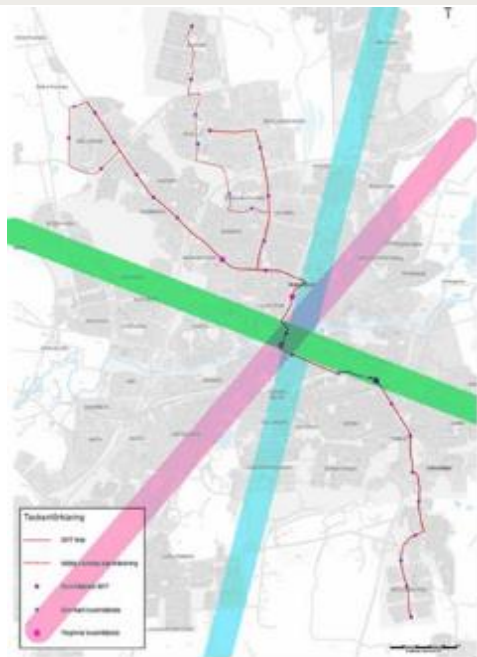

- First part to be built in 2021–2025.
- Total distance 7 kilometres.
- On about half the distance – the busiest part – the buses will have own lanes and receive priority in traffic signals.
- Estimated cost for the first part is 18–25 million euros, of which half comes from governmental funding.

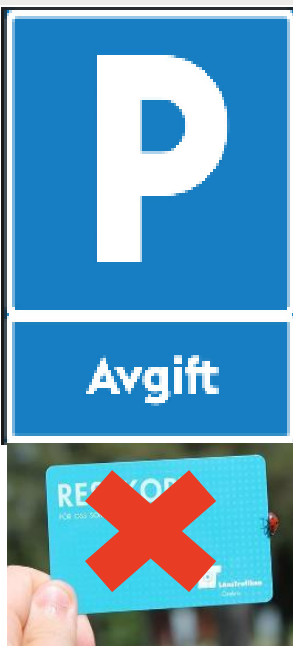

# Will BRT be enough to reach our targets?

# Additional measures already decided

- Substantial increase in parking taxes.
- Investigation of a new city bus network

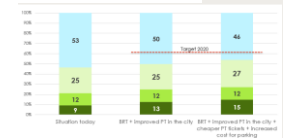

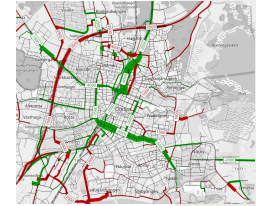

## Still more needed to reach targets!

- An attractive and dense city.
- Lower speed for car traffic.
- Signal priority for walking and cycling.
- Reduced space for car parking.
- Incentives from national level.

# Summary – lessons learnt

1. Modelling results and illustrations important tools to visualize :
  - the need for action
  - what can be achieved in terms of accessibility and attractiveness (story telling)
  - The impact of different measures, giving a roadmap for further action.
2. Backcasting can also help us to set better targets in the future.
