

Better integrating future mobility

THE DATA PLATFORM TO MANAGE FUTURE MOBILITY ON THE CITY STREETS

Thibault Castagne

Polis Conference - Shared Data for Shared Micro-mobility- 2nd of December 2020

POLIS
CITIES AND REGIONS FOR TRANSPORT INNOVATION

ANNUAL
CONFERENCE
2020

Innovation in Transport for Sustainable Cities and Regions
Arnhem-Nijmegen City Region | 2-3 December 2020

Learnings for operators and city authorities from implementing micro-mobility management systems in a range of European markets

1 - Introduction about Vianova

2 - Changing landscape & good practices

3 - Presentation of Use cases

How to better integrate future mobility on the city streets

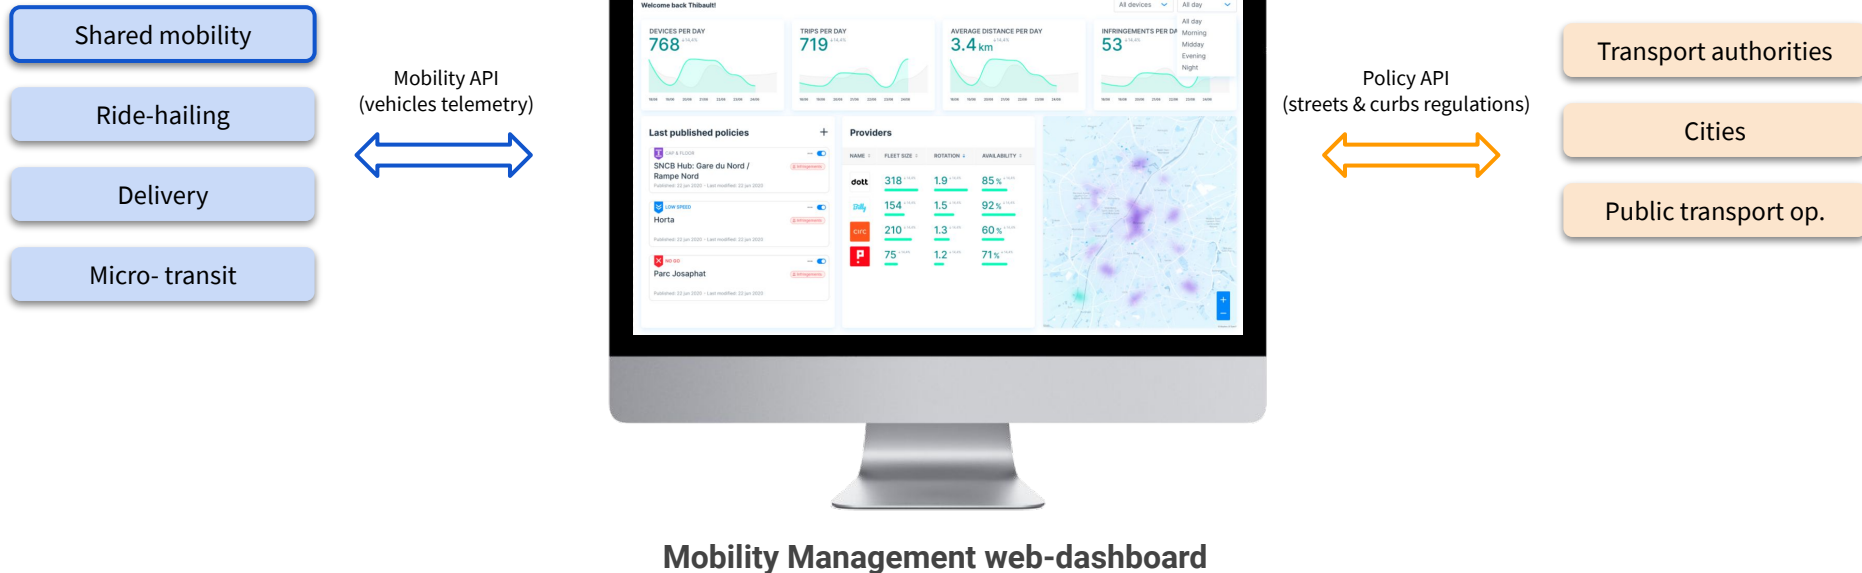

Challenged public order, safety & city transit

Cities need data and efficient tools to supervise a range of mobility systems on the city streets

1 - Vianova: a mobility platform for cities, built with cities

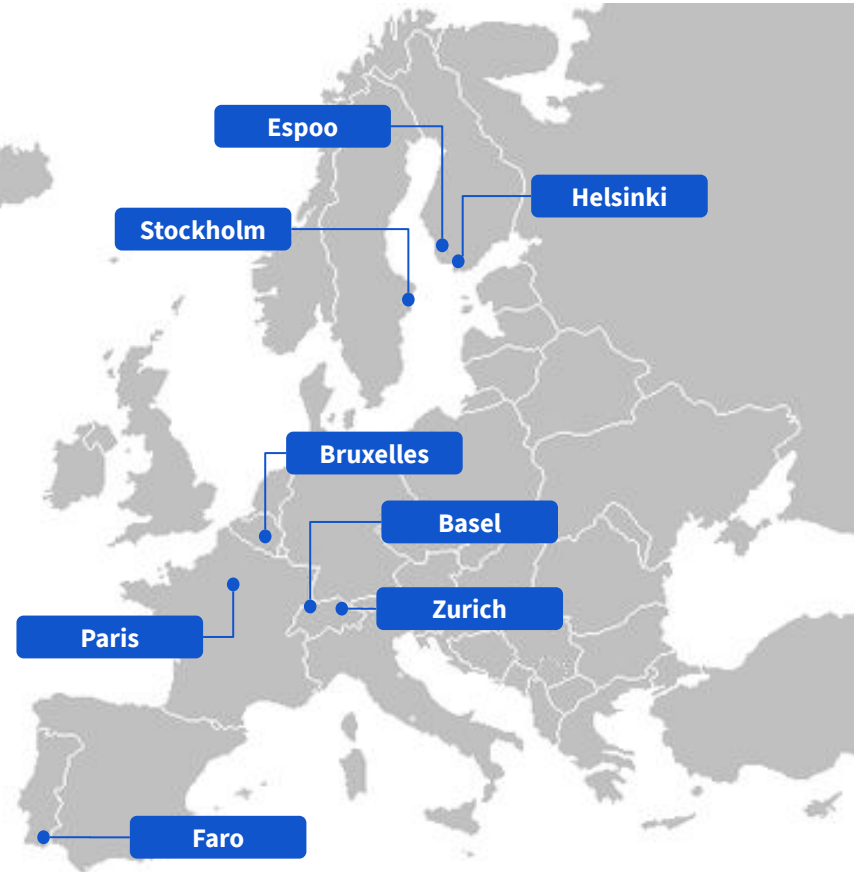

- Enabling efficient share of public space
- Promoting a safer & multi-modal transport system

1 - Sharing experience and good practices from EU cities

- Co-led a **dozen of mobility data projects** with European cities
- **Set-up mobility management system and** advised cities on data analysis and new mobility policies
- **Dedicated client support** and project management capabilities

Client organisation of Vianova:

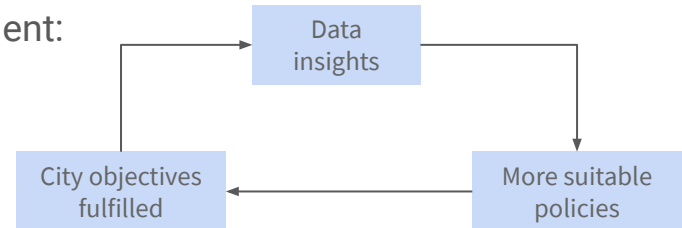

2- Changing landscape: much better 2020 than 2019, 2018

What we saw on the ground for the last 18 months:

1. More **maturity** from cities: **Data & Policies**
2. **Cities** are becoming the **main client**: PPP, tenders, permits, etc.
3. **Operators engaging** in (very) **constructive** ways with cities: Data & Policies
4. Cities are paying attention to each other ! **Good ideas are being shared**
5. **Data quality is significantly improving** ! Nearly universal use of international formats (MDS, GBFS)
6. Data privacy and **understanding of GDPR is improving**

2 - Guidelines for shared-mobility management

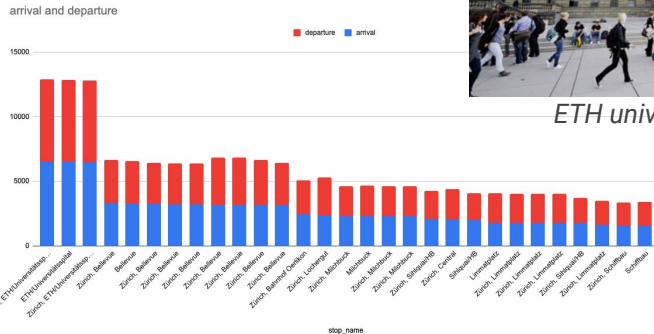

1. Develop their vision for shared (micro-) mobility as part of their **Sustainable Urban Mobility Plan**
2. Set a **regulatory framework that fit into that strategic vision**
 - a. Leave enough flexibility to adapt / add policies
 - b. Add **data requirements**: data quality, MDS data format
 - c. Include safety, sustainability and equity criteria
3. Set clearly the **purposes of data collection** and communicate it well to operators within data agreements
4. **Engage into a virtuous circle** - micro-mobility management:
 - a. Build: policies
 - b. Measure: control & analysis
 - c. Learn: audit

3 - Presentation of use cases

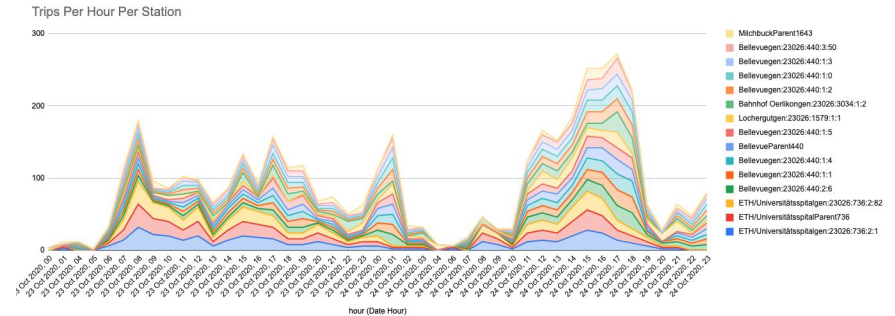

Enabling multi-modal journeys through mobility hubs, and improving public transport service

Prioritise deployments of mobility hubs

ETH university

Improve quality of service & diminish wait time

When are the most micro-mobility trips
vs tram schedule

Bruxelles: Deployments of 20 mobility hubs

Using pick-up & drop-off insights from shared vehicles to map & dimension mobility hubs grid

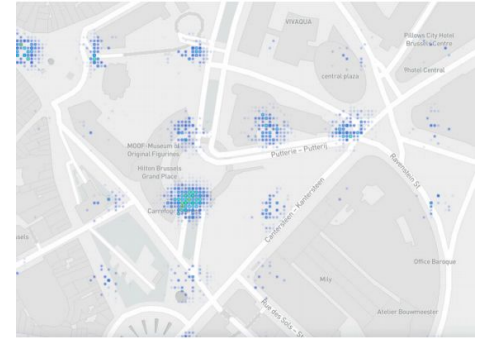

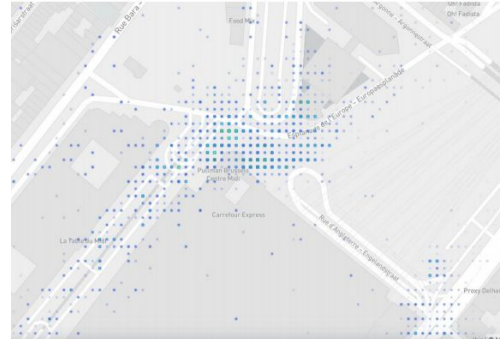

Vehicles
telemetries

Mobility
insights

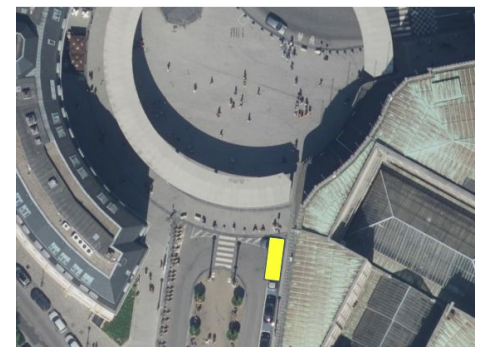

Urban planning
decisions

+ Monitoring of usage

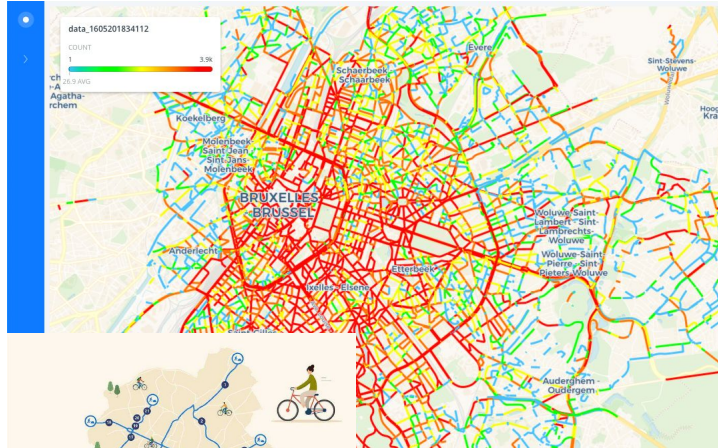

Gare Bruxelles Midi

Gare Bruxelles Central

Bruxelles: planning and usage of cycling lanes

Accelerating micro-mobility post covid and ensuring safety of riders

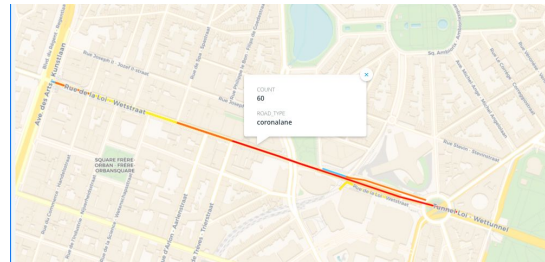

dott

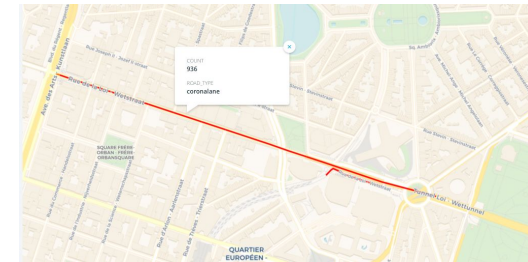

Coronalanes

Coronalane: Rue de la Loi (May)

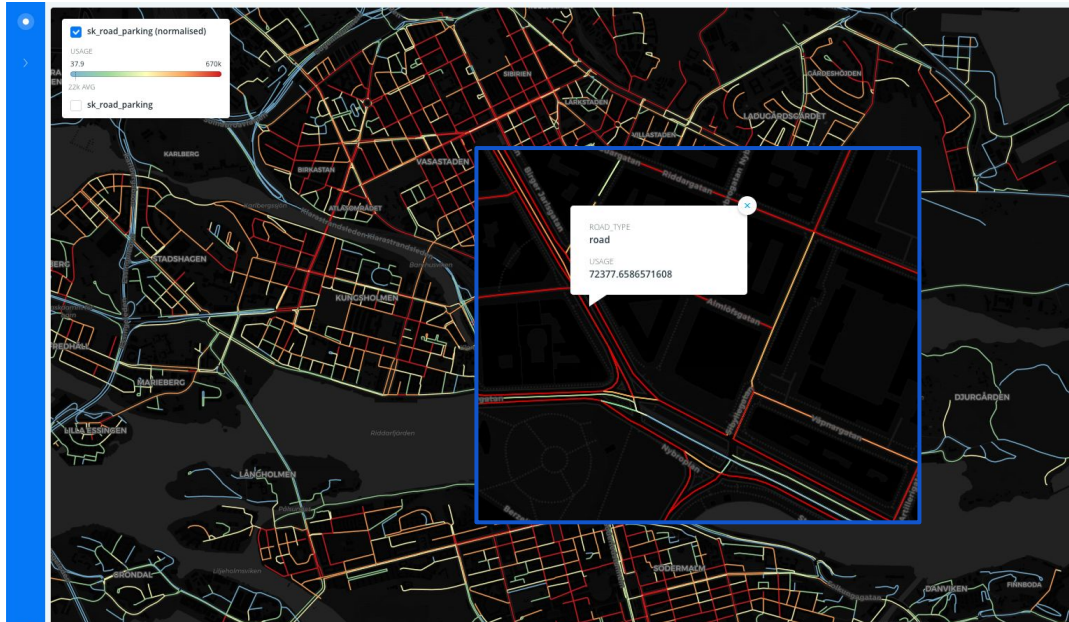

20 trips/ day in Feb

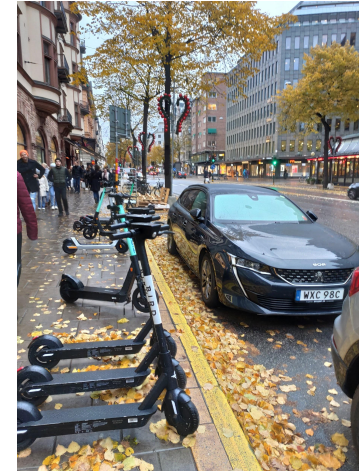

900 trips/ day in July

Stockholm: cluttered sidewalks & parking density

Easily spot streets with cluttered sidewalks and create specific parking infrastructure & policies

Normalised density of parked devices per street section

Birger Jarlsgatan

Spotting streets with high parking density
Link to citizens complaints

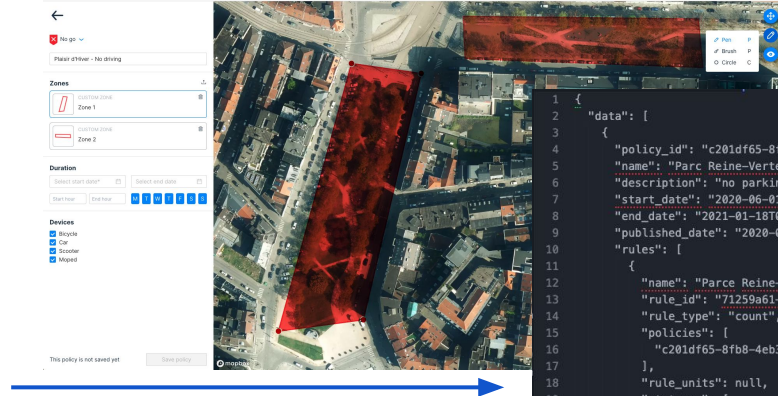

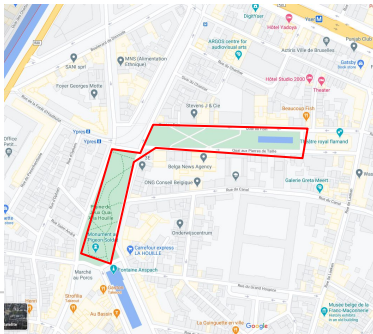

- Parking infrastructure (repurpose parking bay)
- No-parking policies on these streets

Digitally expressed policies to operators

Reducing ambiguity and communication complexity

Policy Name : Bruxelles Plaisir d'hiver

The area of Plaine de Jeux Quai à la Houille will be forbidden to all "cyclo-partages" from 7am to 11pm the next three weekends. The area will also be forbidden the following two days after the last weekend for cleaning efforts.

Fixing caps (or not) & requiring high quality of service

Audit Equity:

- Fleet distribution in cities
- Policy: distribution requirements

Audit Performance:

- Vehicle rotation
- Policy: reduce/increase caps

Audit Quality of service:

- Fleet availability
- Policy: reduce/increase caps

Key takeaways

- Enable data sharing with operators, privileging the **MDS format for regulation & planning**
- **Comply with GDPR**: purposes, data minimisation & retention, systems security
- Engage with a range of operators that could **serve your city mobility objectives**
- Use a micro-mobility management system, like [Vianova.io](https://vianova.io), **to control, regulate, plan and monitor**
 - Cost-efficient: development costs shared between 10-15 cities
 - Experienced: GDPR compliance, data quality & policy management
 - Transparent: Open-API
- Engage into a **virtuous circle of Build-Measure-Learn**
 - **Collaborative** relationship with operators

Thank you for listening & glad to answer any question
