

SURF – Sustainable URban Freight

Call for Experts

[POLIS](#) is launching a new project, [SURF \(Sustainable URban Freight\)](#), that will guide city planners, business leaders and other freight decision-makers to develop a vision and strategy pathway for sustainable urban freight.

The project is a collaboration with [Environmental Defense Fund Europe](#), one of the world's leading non-profit organizations that is working to turn environmental solutions into action. Taking place between April and December 2021, the project will focus specifically on the design and implementation of **zero-emission zones for freight (ZEZ-Fs)**, which can dramatically reduce carbon emissions and contribute to healthier cities.

Through this Call, SURF is looking to create a pool of experts who are qualified to carry out training, studies, on-demand technical assistance and to organise tailored technical meetings for city planners, business leaders and other freight decision-makers.

Experts may be involved as trainers, speakers, coaches, consultants, or mentors. Responsibilities and compensation may vary according to the type of activity to deliver.

If you have experience in providing technical advisory support on urban freight, feel free to [express your interest by means of this form](#). We will assess your profile and contact you when a selected city or project matches your expertise.

The call for experts will stay open throughout the duration of the project.
